As assets have flowed in over the past 40 years, Sustainable Investing has evolved. The discipline, originally known as Socially Responsible Investing, first focused on excluding companies that conducted business in South Africa, or participated in industries such as tobacco, alcohol, and firearms. In time, the list of industries to avoid increased to include soft drinks, fast food, and oil and gas, among numerous others. Performance of initial strategies lagged, and the approach has been modified. Now, instead of merely identifying industries to avoid, the discipline promotes "sustainable" business practices across all industries that can have an "impact" on global issues such as climate, hunger, poverty, disease, shelter, and workers' rights. Given the strategy's focus on leading management practices, we expect the growth curve for Sustainable Investing to again slope upward in the years ahead. Each month, we examine at an aspect of sector investing. This month, we are looking at growth and valuation. Investors hunting for stocks that reasonably balance long-term growth prospects and current value characteristics might want to look at companies in the Healthcare, Financial, and Communication Services sectors. These are among the industry groups that are selling for (price/earnings)/(growth+yield) ratios at or below the S&P 500's ratio of 2.1. To generate the PEGY ratios, we use the P/E ratio for each sector based on forward earnings for the numerator. For the denominator, we average the growth rates for the past five years along with two years of forward estimates, this in order to achieve a less-volatile earnings-growth rate trend. We then add the current yield to approximate total return. As an example, the current S&P 500 P/E ratio is 21, the current yield is 1.1%, and the historical growth rate is 9%. The formula is 21/(1.2+9.0) = 2.1. Sectors with favorable growth and valuation characteristics, in addition to the three listed above, also include Energy and Materials. Premium-valued sectors with low growth rates include the Consumer groups. Based on our analysis of growth rates and valuations, along with other factors, we have established our over-weight sectors as Information Technology, Financial, Utilities, and Communication Services. Our under-weight sector is Consumer Discretionary. Our Market-Weight sectors include Energy, Consumer Staples, Healthcare, Materials, Real Estate, and Industrial. The Vickers Top Buyers & Sellers is a daily report that identifies the five companies the largest insider purchase transactions based on the dollar value of the transactions as well as the five companies the largest insider sales transactions based on the dollar value of the transactions. The stock market keeps hitting all-time highs. We believe that diversification across sectors is powering this bull market and is wider than discussed in the media and by overall investing commentary. We want to highlight some of the high-flying sectors and individual companies that are having a banner year outside of the strong upward driver of AI. As such, the following is a two-tiered list of companies in Argus' fundamental Universe of Coverage and highlight stocks that are seeing the highest gains from their 52-week lows. We used our Argus screener to find large caps above \$250 billion in market cap, and then sorted by sector. We also note our rating and the percentage gains in these stocks. The first list includes non-tech companies, while the second includes the tech companies. Some in this list are technically not categorized as IT companies, but we moved them into this group as IT is their main function. Sign in to access your portfolio Sign in Public cloud is widely considered to be the future of enterprise computing, and Azure is a leading service that benefits the evolution to first to hybrid environments, and then ultimately to public cloud environments. Momentum is slowing in the ongoing shift to subscriptions, particularly in Office, which is generally considered a mature product.
